

C O N T E N T S

J. Lewandowski, Z. Gnutek and J. Badur: Address for Professor Krzysztof Jan Jesionek Anniversary	3
J. Mikielwicz: Utilisation of bleed steam from power plant to increase saturation temperature in organic Rankine cycle	21
Z. Gnutek: On the Goliński-Jesionek multistage combined air/steam systems with external combustion	33
L. Kalmár, G. Janiga, B. Fodor and L. Soltész: Characterization of different one-stage blower designs using three-dimensional unsteady numerical flow simulation	55
K. Badyda: Mathematical model for digital simulation of steam turbine set dynamics and on-line turbine load distribution	65
A. Błaszczyk: Liquid flow parameters at the outlet of the formed suction intake with a rib	83
A. Fortuna: Determination of influence of internal surface roughness of a fan rotor onto its performance parameters	111
A. Zaryankin: Two-tier low pressure cylinders for condensing steam turbines	123
P. Krzyślak and M. Joachimiak: The analysis of the stream-air mixture during a flow through a tube bank inside a condenser	131
R. Bartnik: Thermodynamic fundamentals for production of electric power in hierarchical j -cycle system	141
R. Puzyrewski: Towards to efficiency maximum within a pressure increasing process	153
M. Banaszkiwicz: Steam turbines start-ups	169

G.P. Negreanu, D. Stanciu, L. Mihaescu, I. Pisa, I. Oprea and V. Berbece: Testing a new lignite prototype burner by experiment and numerical modeling	199
I. Iliev and S. Lazarov: Usage of thermosyphon for avoiding of low grade corrosion on the surfaces of air heaters and increasing of thermal efficiency of steam generators PK-38-4	211
P. Horbaj, G. Braunmiller and P. Taš: On a environmen- tally friendly supply of energy	221
